REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for automatically generating an object descriptive model. The sole independent claim identifies the uniquely distinct feature, "wherein a selectable threshold yields a decision whether a group becomes a part of the recognition model and at least strong groups are used for a model for a partial recognition of an object, strength being determined by the number of the group features and after a first model has been generated, additional images are recorded, wherein new object descriptive features are obtained by subjecting the new features to a similarity determination, and sufficiently similar new features are added to existing groups in completing the groups". The closest prior art, Mulet-Parada et al. (USPAP 2004/0047498 A1), disclose an image processing technique which identifies pixels in images which are associated with features having a selected shape, such as but not exclusively step edge, roof, ridge or valley, the shape of the intensity profile in the image is compared in an intensity independent way with a shape model to select those pixels which satisfy the shape model and are thus associated with the feature of interest; while Chen et al. (USPN 6,834,288 B2), disclose content based similarity retrieval system for image data, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
